Kinase polypeptides useful for treating cancers, Alzheimer's disease, viral infections, diabetes, obesity, organ transplant rejection and rheumatoid arthritis.

Example 1; Page 204-205; 218pp; English

enzymes and polynucleotides encoding the polypeptides. The kinase polypeptides and their modulators are useful for treating a disease or disorder such as cancer, immune-related diseases, cardiovascular disease, brain or neuronal-associated disease and metabolic disorders, including cancers of tissues, cancers of hematopoietic origin, diseases of the central nervous system, diseases of the peripheral nervous system, allowed the peripheral nervous system, allowed the peripheral nervous system, allowed to the peripheral nervous system. Alzheimer's disease, parkinson's disease, multiple sclerosis, amourtophic lateral sclerosis, viral infections, infections caused by prions, cateral sclerosis, viral infections, infections caused by prions, mood disorders, attention disorders, miltiple sclerosis, hypotension, hypertension, psychotic disorders, neurological disorders, dyskinesias, metabolic disorders, and organ transplant rejection. They are also useful of treating rhinitis, autoimmunity, atherosclerosis, psoriasis, osteoarthritis, asthma, chronic inflammatory pelvic disease, chronic inflammatory bowel disease, rheumatoid arthritis, metabolic disorders such as diabetes, obesity, cardiovascular diseases such as reperfusion injury, coronary thrombosis, clotting disorders and atherosclerosis, ocular diseases such as glaucoma, retinopathy and macular degeneration, psychiatric and neurological disorders such as anxiety, schizophrenia, dementia, manic depression, etc. The polymucleotides are useful in gene therapy techniques to treat the above mentioned disorders. Sequences AAH46891-46922 represent human protein kinases encoding cDNA molecules invention provides human protein kinases and protein kinase-like

The invention relates to an isolated human serine/threonine or protein kinase, 59079 or 12599 polypeptide, encoded by nucleic acid molecule comprising at least 88% identity to the nucleic acids appearing as ABX11641 and ABX11642 or their complement, a naturally occurring variant of the kinases or their fragments. Also included are a non-human host cell containing the nucleic acids, an antibody specific for the proteins, identifying a compound which binds to the kinase (by contacting the cell containing whether the kinase binds to the kinase (by contacting the determining whether the kinase binds to the kest compound and modulating the activity of kinase using the identified compound and modulating the activity of kinase using the identified compound and modulating their encoding nucleic acids are useful as diagnostic and therapeutic gents for preventing a disease or condition associated with an aberrant or unwanted 59079 or 12599 activity in a subject, including nucleic acids are useful as a thrombocytopaenia, leukaemia, cardiovascular diseases such as a subject, including leukaemia, disorders involving Blood vessels such as athrombocytopaenia, leukaemia, cardiovascular diseases, haemolytic anaemia, cellular proliferative disorders cuch as acutoimmune codisorders mellitus, psoriasis, inflammatory bowel disease, rheumatoid arthritis, and multiple sclerosis (many examples of diseases condidion nucleic acids and antibodies are useful in screening assays, prognosic assays, prognosic assays, and monitoring clinical trials and pharmacogenomics). The kinases and their encoding nucleic acids are encoding nucleic acids and antibodies are useful in screening assays, detection assays (e.g. forensic biology), and predictive medicin acids are useful as query sequences to perform a search against public databases to condentify when kinase adale accodes an encoding nucleic acids and assays and accodes and disorders accodes and disorders assays, prognosic assays, and encoding nucleic acids and antibodies are unceful in screeni Claim 2; Page 39-48; 119pp; English.

Claim 2; Page 58-84; 119pp; English.

The invention relates to an isolated numan serine/threunine or protein kindse, 59079 or 12599 polypeptide, encoded by nucleic acids appearing as Comprising at least 85% identity to the nucleic acids appearing as ABX11642 or their complement, a naturally occurring variant of the kinases or their fragments. Also included are a non-human host cell containing the nucleic acids, an antibody specific for the proteins, identifying a compound which binds to the kinase (by contacting the kinase or a cell expressing the kinase with a test compound and modulating the activity of kinase using the identified compound. The kinases and the activity of kinase using the identified compound. The kinases and the activity of kinase using the identified compound. The kinases and their aciding nucleic acids are useful as diagnostic and therapeutic contern recoding nucleic acids are useful as upject, including contents involving blood vessels such as atherosclerosis, and Kaposi's cardiovascular diseases uch as heart failure, and myczadial infarction; cardiovascular diseases uch as hord as atherosclerosis, and Kaposi's sarcoma; blood platelets disorder such as thrombocycopaenia, leukaemia, cardiovascular disease, haemolytic anaemia; cellular proliferative disorders such as cancer; and protein kinase disorders such as autoimmune disorders are included in the specification). The kinases, their encoding nucleic acids and antibodies are useful in screening assays, detection assays (e.g. forensic biology), and predictive medicine (e.g. detection assays (e.g. forensic biology), and predictive medicine (e.g. diagnostic assays, prognostic assays, and monitoring acids and acids and antibodies are useful in screening assays.

Condignostic assays, prognostic assays, and monitoring acids are useful as query sequences to perform a search against public databases to identify other family members or related sequences. The present sequence contains and antibodies acids and assays or related sequences. The present sequence The invention relates to an isolated human serine/threonine or encodes the kinase 12599

ω

CC polynucleotides are useful for preventing or treating a cardiac disease, such as congestive heart failure, dilated congestive cardiomyopathy, CC such as congestive heart failure, dilated congestive cardiomyopathy, mitral valve disease, acrtic valve disease, angina disease, acrtic valve disease, acrtic valve disease, angina pectoris, myocardial infarction, cardiac arrhythmia, pulmonary, arterial or rhenovascular hypertension, arteriosclerosis, atherosclerosis and cardiac tumours in humans. The polypeptide is also useful for detecting the expression of a protein capable of regulating signal transduction or the expression of a protein capable of acting as a donor or acceptor molecule of a phosphate group. The monoclonal antibodies can be used as crobes for detecting discrete antigens expressed by tissue or cell samples, and therefore used in humans for localization and monitoring of microbial infection.

The present sequence encodes a splice variant of human in signal transduction polypeptide. The polypeptide is designated H19G5. The protein is capable of regulating signal transduction and exhibits kinase activity. The H19G5 is expressed in the heart. H19G5 cativity. The H19G5 reasons are useful for preventing or treating a cardiac disease, such as congestive heart failure, dilated congestive cardiamyopathy, hypertrophic cardiamyopathy, restrictive cardiamyopathy, cardiamyopathy, hypertrophic cardiamyopathy, cardiamyopathy, hypertrophic cardiamyopathy, cardiamyopathy any pectoris, myocardial infarction, cardiac arrhythmia, pulmonary, anterial or thenovascular hypertension, arteriosclerosis, atherosclerosis cand cardiac tumours in humans. The polypeptide is also useful for detecting the expression of a protein capable of acting as a donor cor acceptor molecule of a phosphate group. The monoclonal antibodies can be used as probes for detecting discrete antigens expressed by tissue or cell samples, and therefore used in humans for localization and controring of microbial infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       88.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           "signal transduction polypeptide H19G5 splice
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel h19G5 polypeptides capable of regulating signal transduction and exhibiting kinase activity useful for identifying antibodies to treat cardiac diseases, and additional mediators of signal transduction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Signal transduction, H19G5, kinase, cardiac disease, angina pectoris, congestive heart failure, dilated congestive cardiomyopathy; hypertrophic cardiomyopathy; restrictive cardiomyopathy; hypertension, mitral valve disease; aortic adisease; tricuspid valve disease; myocardial infarction; cardiac arrhythmia; arteriosclerosis; atherosclerosis; cardiac tumour; microbial infection; splice variant;
                                                                                                                                                                                                                                                                                                                                                                                                                                  a splice variant of a signal transduction polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Location/Qualifiers

```
The invention comprises the amino acid and coding sequences (located on chromosome 1) of a human kinase protein that is related to the myosin light chain kinase subfamily. The human kinase DNA and protein sequences of the invention are useful for identifying agents that modulate the activity of the human kinase protein. Kinase-modulating agents are useful for treating a disease or condition mediated by a human kinase protein. The human kinase DNA sequences can be used to produce transgenic animals which are useful for studying the function of kinase proteins and identifying/evaluating modulators of kinase protein activity. The present DNA sequence encodes the human kinase protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New kinase proteins related to myosin light chain kinase subfamily and encoding polynucleotide, useful for diagnosing, treating disease or condition mediated by the kinase protein and for identifying modulators.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CCTACGGAGCAGAACTCGGGCCCAGGCATACAGGGAGCGAGACATCCTGGCCGCGCTGAG
myosin light chain kinase subfamily; kinase protein-mediated disease; transgenic animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Сарв

The invention comprises the amino acid and coding sequences (located on chromosome 1) of a human kinase protein that is related to the myosin light chain kinase subfamily. The human kinase DNA and protein sequences of the invention are useful for identifying agents that modulate the activity of the human kinase protein. Kinase-modulating agents are useful for treating a disease or condition mediated by a human kinase protein. The human kinase DNA sequences can be used to produce transgenic animals which are useful for studying the function of kinase protein animals identifying/evaluating modulators of kinase protein activity. The present DNA sequence encodes the human kinase protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New kinase proteins related to myosin light chain kinase subfamily and encoding polynucleotide, useful for diagnosing, treating disease or condition mediated by the kinase protein and for identifying modulators.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CCACCGCTGGTCACGGGCTGCTGGACCAGTTTGAGACCCGCAAGACCCTCATCCTCAT

The invention relates human kinases (PKIN) and their corresponding nucleic acid sequences. PKIN and its DNA are useful for diagnosing, retating and preventing cancer, an immune system disorder (e.g., acquired immune deficiency syndrome (AIDS), Addison's disease, allergy, acquired thereosclerosis, multiple sclerosis, psoriasis), disorders affecting atherosclerosis, multiple sclerosis, psoriasis), disorders affecting cardiovascular disorder (e.g., arteriosclerosis, cirrhosis, hepstting), cardiovascular disorder (e.g., hypertension, myocardial infarction, Goodpasture's syndrome), and a lipid-disorder (e.g., fatty liver, Goodpasture's syndrome), and a lipid-disorder (e.g., fatty liver, Goodpasture's disease, Niemann-Pick's disease, hypercholesterolaemia, hyperlipidaemia, obesity), and for assessing the effects of exogenous compounds. Anti-PKIN antibody is useful in a diagnostic test for a condition or a disease associated with the expression of FKIN in a condition associated with decreased or increased expression of functional PKIN.

The proteome of a tissue or cell type. PKIN DNA is useful for creating techniques and to analyse the proteome of a tissue or cell type. PKIN DNA is useful for creating chockin humanised animals or transgenic animals to model human diseases, and in somatic or germline gene therapy. The present sequence is human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1022
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1082
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1142

```
capable of regulating signal transduction and exhibits kinase activity. The H19G5 transcript is expressed in the heart. H19G5 polypeptides and polymbolating signal transduction and exhibits kinase activity. The H19G5 transcript is expressed in the heart. H19G5 polypeptides and polymbolatorides are useful for preventing or treating a cardiac disease, and as congestive heart failure, dilated congestive cardiomyopathy, restrictive cardiomyopathy, mitral valve disease, anortic valve disease, and pectoris, myocardial infarction, cardiac arrhythmia, pulmonary, arterial or transvascular hypertension, arteriosclerosis, atherosclerosis and cardiac tumours in humans. The polypeptide is also useful for detecting the expression of a protein capable of acting as a donor or acceptor molecule of a protein capable of acting as a donor or acceptor molecule of a phosphate group. The monoclonal antibodies can be used as probes for detecting discrete antigens expressed by tissue or cell samples, and therefore used in humans for localization and monitoring of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CCTGGTTCCTGAAATCCATGCCTGCGGAGGCCCACTTCATCAACAACCAAGCAGCTCA

Claim 5; Page 191; 197pp; English.

The invention relates to human kinase PKIN proteins and their corresponding cDNAs. A composition containing PKIN agonist is useful for treating a disease or condition associated with decreased expression of PKIN and a composition comprising PKIN antagonist is useful for treating a disease or condition associated with overexpression of PKIN. The disease or condition associated with overexpression of PKIN. The myeloma, sarroma, teratocarcinoma, adenocarcinoma, lymphoma, melanoma, myeloma, sarroma, teratocarcinoma, adenocarcinoma, lymphoma, melanoma, allergies, adult respiratory distress syndrome, atherosclerosis, anaemia, allergies, adult respiratory distress syndrome, autoimmune thyroiditis, goot, bronchitis, Crohn's disease, disbetes autoimmune thyroiditis, Good pasture's syndrome, Graves' disease, osteoarthritis, osteoporosis, pactoreatitis, psoriasis, allergies, cushing, allergies, allergies, allergies, cartacottis, cardio arthritis, allergies, allergies, allergies, cartacottis, allergies, allergies, allergies, cartacottis, allergies, all aneurysms, congestive heart failure, angina pectoris, myocarditis, ischaemic heart disease, chronic bronchitis, lung tumours); lipid disorder (fatty liver, Fabry's disease, Niemann-Pick's disease, hypocholesterolaemia, obesity). PKIN DNA is useful for assessing toxicity of a test compound and in gene therapy. The present sequence is human

The present sequence encodes a novel protein kinase. The nucleic acids and the protein kinases they encode may be used in the treatment and disquesses associated with inappropriate kinase expression such as immune-related diseases and disorders, cardiovascular disease, complementary sequences may also be used as DNA probes in diagnostic assays. The kinase polypeptides may be used as antigens in the production of antibodies of kinase expression and activity. Anti-kinase antibodies expression and activity. Diseases related to kinase expression and cativity include rheumatoid arthritis, atherosclerosis, autoimmune of disorders, complications of organ transplantation, myocardial infarction, immune disorders, cardiomyopathies, strokes, renal failure, oxidative-continuammatory pelvic disease, multiple sclerosis, asthma, osteoarthritis, continuammatory pelvic disease, multiple sclerosis, asthma, osteoarthritis, and real and reproductive continuaming, and reproductive continuaments and reproductive continuaments.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            2047

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a compound comprising a sequence comprising 8-80 base pairs (bp) targeted to a nucleic acid encoding MARK3 (MAP/Microtuble affinity-regulating kinase 3), that specifically whybridises with the nucleic acid encoding MARK3 and inhibits expression of MARK3, i.e. is an antisense oligonucleotide (AO). Also included are a composition comprising the compound and a carrier or diluent, inhibiting the expression of MARK3 in cells or tissues, treating an animal having or suspected of having a disease or condition associated with MARK3 and screening for an antisense compound. The antisense oligonucleotide is useful for preparing a composition for treating hyperproliferative diseases. Alzheimer's disease. The present sequence is a MARK3 associated cDNA included in the figures but not mentioned anywhere else in the

New human kinase polypeptide, useful in diagnosis, prevention and treatment of cancer, immune disorder, growth and developmental disorder, cardiovascular disorder and lipid disorder.

Claim 5; Page 191-193; 196pp; English

The present invention relates to an isolated human kinase polypeptide (PKIN) or a biologically active/immunogenic fragment of PKIN. PKIN is useful for diagnosing, treating and preventing cancer (e.g., leukaemia, lymphoma, melanoma), an immunome disorder (e.g., acquired immunodeficiency syndrome (AIDS), Addison's disease, allergy, anaemia, asthma, Crohn's disease, rheumatoid arthritis), a growth and developmental disorder (e.g. arberosclerosis, hypertension, myocardial cardiovascular disorder (e.g., atherosclerosis, hypertension, myocardial infarction), and a lipid disorder (e.g., fatty liver, cholestasis, cardiovascular disorder (e.g., atherosclerosis, hypertension, myocardial cardiovascular disorder (e.g., fatty liver, cholestasis, dauge steening techniques and to analyse the proteome of a tissue or cell type. PKIN is useful for creating knockin humanised animals or transgenic cor differences in the chromosomal location due to translocation, inversion, companded human diseases, in somatic or germline gene therapy, to differences in the chromosomal location due to translocation, inversion, corrober for mapping naturally occurring genomic sequences. PKIN is useful in southern or northern analysis, dot blot or other membrane-based corrobation dimunosorbent (ELISA)-like assays and in microarrays utilising fluids or tissues from patients to detect altered PKIN expression. The present sequence is human PKIN-18 cDNA. Note: This sequence is said to encode PKIN-18 referred as SEQ ID NO:18 (AAE19160). However this does not to be the case appear

Immunosuppressive, dermatological, anorectic, cytostatic, antidabetic, hammosuppressive, dermatological, anorectic, cytostatic, antidabetic, hammosuppressive, dermatological, anorectic, cytostatic, antidabetic, neuroprotective, notropic, antiparkinsonian, and antilipaemic activity.

A polynucleotide encoding a polypeptide of the invention may have a use in gene therapy, and as a vaccine. A polypeptide of the invention is useful in the manufacture of a medicament for treating a syndrome associated with a human disease, the disease selected from a pathology treating or preventing NoVX-associated disorders such as cardiomyopathy, treating or preventing NoVX-associated disorders such as cardiomyopathy, atherosclerosis, hypertension, scleroderma, obesity, cancer, diabetes, hencosclerosis, infections, anorexia, cancer-associated cachexia, neurodegenerative disorders (e.g. Alzheimer's disease or Parkinson's disorders associated disorders (e.g. Alzheimer's disease or Parkinson's disorders associated with chronic diseases. The nucleic acids are also used as hybridisation probes, in chromosome mapping, tissue typing, preventive medicine, and pharmacogenomics. The polypeptides are also

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This invention relates to a novel isolated NOVX polypeptide comprising a fully defined sequence of, a mature form, one or more conservative substitutions or at least 95% identity to 247 amino acide as given in the specification. The invention may be useful for the development of compounds with a cytostatic, antidiabetic, anorectic, cerebroprotective, neuroprotective, antiinflammatory, thyromimetic or cardiant activity. In addition, the disclosed sequences may prove useful for gene-therapy or antisense-therapy. The invention may be useful for the diagnosis and treatment of discorders associated with aberrant expression or activity of the NOVX polypeptide, such as cancer, diabetes, obesity, and endocrine, CNS, cardiovascular and inflammatory disorders possity, and endocrine, various detection and screening assays, chromosome mapping, tissue typing and predictive medicine. The present sequence is that of a gene which encodes a human NOVX protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              4931 AGCGAATCGCCAGGAAACCCACCGTGTGTGAGTCTGAGATCCGGGCCTATATGCGGCAGG 4990

```
The invention relates to an isolated human serine/threonine or protein kinase, 59079 or 12599 polypeptide, encoded by nucleic acid molecule comprisibing at least 88% identity to the nucleic acids appearing as ABX11641 and ABX11642 or their complement, a naturally occurring variant of the kinases or their fragments. Also included are a non-human host cell containing the nucleic acids, an antibody specific for the proteins, identifying a compound which binds to the kinase (by contacting the kinase or a cell expressing the kinase with a test compound and modulating the activity of kinase using the identified compound. The kinases and their encoding nucleic acids are useful as diagnostic and therapeutic cell companies for preventing a disease or condition associated with an aberrant or unwanted 59079 or 12599 activity in a subject, including the accome, blood platelets disorders auch as thrombocytopaenia, leukaemia, cardiovascular diseases such as heart failure, and mycardial infarction; disorders involving Blood vessels such as athrombocytopaenia, leukaemia, such as cancer; and protein kinase disorders such as thrombocytopaenia, leukaemia, cuch as cancer; and protein kinase disorders such as autoimmune codisorders, diabetes mellitus, psoriaris, inflammatory bowel disease, rheumatoid arthritis, and multiple sclerosis (many examples of disease, condisporders are included in the specification). The kinases and conding nucleic acids and antibodies are useful in screening assays, prognostic assays, and monitoring clinical trials and charmacogenomics). The kinases and their encoding nucleic acids are coding nucleic acids and antibodies are useful in screening acids are useful as query sequences to perform a search against public databases to identify other family members or related sequences. The present sequence conders the kinase
                                                                                        Novel isolated human protein kinase, designated 59079 or 12599 polypeptide, useful as diagnostic and therapeutic agents for preventing cardiovascular diseases, proliferative disorders, and protein kinase
                                                                                  Novel isolated human protein kinase,
                                                                                                                                                                                                                             Claim 2; Page 58-84; 119pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        14276
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             14156
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                              The invention relates to a novel method for detecting soft tissue sarcoma which comprises obtaining a fire soft tissue sample from an individual and a normal soft tissue sample from the same or different individual, determining the expression of a gene in both samples and comparing the expression of the gene in both soft tissue samples where a higher level of protein expression in the firet soft tissue sample; where a higher level presence of soft tissue sarcome the expression of the gene in both soft tissue sample; where a higher level presence of soft tissue sarcoma be useful for detecting soft tissue sarcoma, possibly via gene therapy or vaccine production. The nucleic acid sequences may be useful in diagnostic and screening applications. The current sequence is that of a human soft tissue sarcoma-upregulated DNA of the invention. The current sequence is not shown within the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          120

```
The present invention relates to new isolated proteins (NOVX) and their coding sequences (ABV99327-ABV99595 and ABP70049-ABP70149), where X is any number from 1 to 48. The NOVX proteins and coding sequences are useful in the manufacture of a medicament for treating a syndrome associated with a human disease, preferably a NOVX-associated disorder. The NOVX coding sequences and proteins are useful for treating, preventing or disquosing diseases, such as metabolic disorders, diabetes, preventing or disquosing diseases, anorexia, cancer-associated cachexia, cancer, neurodegenerative diseases, Alzheimer's disease, parkinson's disease, immune disorders, hematopoietic disorders, cardiovasqular disorders, fertility, bronchial asthma, AIDS, dyslipidemia, metabolic disorders associated with obesity, metabolic syndrome X or wasting disorders associated with chronic disease or various cancers. The NOVX coding sequences and proteins may also be used as targets for the insorders associated with chronic diseases or inhibit e.g. neurogenesis, cell differentiation, cell proliferation, heamatopoiesis, wound healing and angiogenesis, in gene therapy, in generation of antiporery metaboliferation of antiporery metaboliferation of antiporery and angiogenesis, in gene therapy, in generation of antiporery metaboliferation of antiporery metaboliferation of antiporery metaboliferation of antiporery and angiogenesis, in gene therapy, in generation of antiporery metaboliferation of such the production of antiporery metaboliferation of such and angiogenesis, and the pind immunospecifically to NOVX substances for use in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9963 GGTGACCTGCACCTACTGTGGGAGGCCCTGGCTCGGAACGTCGCATGAGCCGTGAGCC

CAM;

The present invention relates to new isolated proteins (NOVX) and their coding sequences (ABV99327-ABV99595 and ABP70049-ABP70149), where X is any number from 1 to 48. The NOVX proteins and coding sequences are useful in the manufacture of a medicament for treating sequences are associated with a human disease, preferably a NOVX-associated disorder. The NOVX coding sequences and proteins are useful for treating, preventing or disgonsing diseases such as metabolic disorders, diabetes, cancer, neurodegenerative diseases, ancer-associated cachexia, cancer, neurodegenerative diseases, Alzheimer's disease, parkinson's disease, immune disorders, haemacopoietic disorders, cardiovascular disorders, fertility, bronchial asthma, AlDS, dyslipidemia, metabolic disturbances associated with obesity, metabolic syndrome X or wasting disorders associated with chronic diseases or various cancers. The NOVX coding sequences and proteins may also be used as targete for the

```
The present sequence represents an isolated polynucleotide sequence (1) from the present invention, which encodes a polypeptide (II) with biological activity. Also described: (1) a vector comprising (1); (2) an expression vector comprising (1); (3) a host cell genetically engineered to comprise (I) which is operatively associated with a regulatory sequence that modulates expression of (I) in the host cell; (4) a polypeptide (II) encoded by (1); (5) a composition comprising the polypeptide of (4) and a carrier; (6) an antibody directed against the polypeptide of (4); (7) detecting (I) or the polypeptide of (4) in a sample; (8) identifying a compound that binds to the polypeptide of (4); (9) producing the polypeptide of (4); and (10) a collection of polymericales comprising at least one of the polymucleotide sequences (1). The polymucleotides (II) can be used as hybridisation probes, oligomers or primers, for chromosome or gene mapping, for the recombinant production of proteins, and for generating antisense DNA or RNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     945 GCAGGAGCCACTGGCTGTGTGCGCCCACCACTGGGAGACCTGAGCACCAAAAACCCTGGG 1004

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to a method (M1) for identifying genes involved in plant resistance or response to pathogenic infection. M1 comprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (M1) is useful for conferring resistance to resistance or tolerance to a plant to bacterial, fungal or viral infection. The present sequence was used to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      982
                             The invention relates to a novel human polynucleotide and the encoded polypeptide. A polynucleotide of the invention may have a use in gene therapy. An oligonucleotide of the invention ADM06202-ADM06773 is useful as a primer for synthesizing the polynucleotide or as a probe for detecting the polynucleotide. The polynucleotides ADM01316-ADM01375 are useful in gene therapy, for developing a diagnostic marker or medicines for regulating their expression and activity, or as a target of gene therapy. The proteins ADM03759-ADM06201 encoded by the polynucleotides are useful as pharmaceutical agents. The present sequence represents a cDNA sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Cell adhesion and extracellular matrix protein 4; CADECM-4; human; anti-HIV; virucide; antiallergic; antiinflammatory; antianaemic; antiparkinsonian; nootropic; antionvulasant; antiinfertility; antiatreriosclerotic; antiathmatic; immunosuppressive; antithyroid; cytostatic; hepatotropic; dermatological; antidiabetic; nephrotropic; antigout; thyrominetic; neuroprotective; osteopathic; antiathritic; antiparasitic; anthelmintic; antipsoriatic; uropathic; ophthalmological; antitheumatic; hemostatic; antibacterial; protozoacide; fungicide; gynaecological; titin; gene therapy; gene; ss.

The present sequence is that of Incyte clone 7326129CB1 cDNA encoding human cell adhesion and extracellular matrix protein 4 (CADECM-4). A crepresentative cDNA library for the full-length polymuclectide is MUSITDNO2, constructed from the muscle tissue RNA of a Caucasian adult common. Homology data suggest the encoded protein to a titin muscle protein. CC MUSITDNO2, constructed from the muscle tissue RNA of a Caucasian adult common provides (See ABZ24578-89), expression vectors, host cells, and thodies, agonists and antagonists. These are useful for diagnosing, antibodies, agonists and antagonists. These are useful for diagnosing, catherosis, cirrhosis, hopatisis, paroxysmal nocturnal catherosclerosis, cirrhosis, hopatisis, paroxysmal nocturnal catherosclerosis, cirrhosis, hopatisis, paroxysmal nocturnal catherosclerosis, orirhosis, hopatisis, paroxysmal nocturnal cubular acidosis, anaemia or mental retardation), neurological disorders (e.g. Alzheimer's disease, parkinson's disease or epilepsy), reproductive cleoration in the menstrual cycle), or autoimmune/inflammatory disorders (e.g. AIDS, allergy, asthma, autoimmune chyroiditis, contact dermatitis, conn's disease, diabetes mellitus, glomerulonephritis, dereoprorely, pancely, or viral, bacterial, fungal, cotecoarthritis, signerome, multiple schematoid arthritis, patecoarthritis, or velicis), or viral, bacterial, fungal, corpurations
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                2731

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes substantially purified human proteins (referred to as open reading frame, ORFX, where X is 1-11491 (see Table 1) in the specification). ABN15762 to ABN27525 encode the human ORFX proteins given in ABP00101 to ABP11500. ORFX proteins are useful for treating or preventing a pathology associated with an ORFX-associated disorder in humans, and in the manufacture of a medicament for treating a syndrome associated with ORFX-associated disorder. ORFX polymucleotide sequences can be used in gene therapy. ORFX sequences can be used in the treatment of cancer, hyperproliferative disorders, incrhosis of liver, or psoriasis, benign tumours, keloid, degenerative disorders hasenorthage, osteoarthritis, neurodegenerative disorders, disorders related to organ transplantation, cardiovascular diseases, disorders related to organ transplantation, cardiovascular diseases, disbetes mellitus, systemic storage disease, various immune deficiencies and disorders, infectious disease, autoimmune thyroiditis, myasthenia gravis, graft-versus-host disease and autoimmune inflammatory eye disease. Organ carbritis, autoimmune inflammatory eye disease. Organ gravis, graft-versus-host cuseful for treating burns, incisions, ulcers, for treating osteoporosis, bone degenerative disorders, or periodontal disease, and for gut
                                                            hyperproliferative disorder; psoriasis; benign tumour; haemorrhage; degenerative disorder; osteoarthritis; neurodegenerative disorder; cardiovascular disease; diabetes mellitus; systemic lupus erythematosus; hypertension; hypothyroidism; cholesterol ester storage disease; immune destorage tinease; autoimmune destoract; infectious disease; autoimmune disorder; rheumatoid arthritis; autoimmune thyroiditis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          reperfusion injury in various tissues and conditions resulting from systemic cytokine damage. N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               format directly from WIPO at ftp.wipo.int/pub/published pct sequences

expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (M1) is useful for conferring resistance to resistance or tolerance to a plant to bacterial, fungal or viral infection. The present sequence was used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   유

```
The invention relates to a novel method for detecting soft tissue sarcoma which comprises obtaining a first soft tissue sample from an individual data and a normal soft tissue sample from the same or different individual, determining the expression of a gene in both samples and comparing the expression of the gene in both soft tissue samples, where a higher level of protein expression in the first soft tissue sample indicates the presence of soft tissue sarcoma. The method of the invention has cytostatic applications and may be useful for detecting soft tissue sarcoma, possibly via gene therapy or vaccine production. The nucleic acid sequences may be useful in diagnostic and screening applications. The current sequence is that of a human soft tissue sarcoma upregulated specification per se but was submitted in CD format by the inventor.
